All this rounds out to a compact set of API endpoints that each backend must implement, along with the allowed HTTP methods:

- `GET /`
- `POST /accounts`
- `POST /accounts/login`
- `GET /accounts/logout`
- `GET, PUT, DELETE /accounts/<str : username>`
- `GET, POST /accounts/<str : username>/tasks`
- `GET, PUT, DELETE /accounts/<str : username>/tasks/<int : id>`
